DAY PASS 21 JUL 2010
Valid From: 21.07.2010 Issued: 21.07.2010 at 12:43
No. 100705154944

Visitor 3000 is a security application that will help you easily keep track of visitors to your organisation

Visitor can issue and print ID passes, make appointment bookings, and produce lists of people known to be on site. These lists may be viewed by security staff, department managers or others in your organisation that may need to know when people have arrived and when they leave.

Although the cost of ownership of Visitor 3000 is very low, it nonetheless includes features only found on systems costing much more. With Visitor, you can take good quality passport-style photos with a low-cost webcam without using expensive cameras or additional video hardware. The software has an in-built photo library to effectively manage your collection of guest photographs. Visitor also supports the most widely used bar code format which can be printed on ID badges for seminars, training sessions, exhibitions or conference applications.

Visitor is also able to maintain a list of day visitors, or employees so you can keep track of who's in and who's out in real time.

Extended features also allow Visitor to be tied into existing access equipment, such as magnetic swipe cards, or proximity key fobs. Visitor provides a professional security-conscious presentation for your organisation. Only three text fields and a couple of mouse clicks are required to issue a DAY-PASS. Each pass or ID badge printed is completely personalised and carries your own firm's identity which can include your company logo.

Hardware Requirements

Computer:	
Processor	x86, > 1.3GHz (single core) for reasonable speed
Operating Systems	2008 Server, WinXP, Win7
Storage (Hard Disk) Installation	40MB absolute minimum

ID Badges, Passes etc.	200-300dpi colour/mono (depends upon Pass/ID type)
Lists and General Print Output	Any inkjet/laser (not more than about 6 years old)
Camera(s):	
Passport (Head and Shoulders)	Webcam =>5MP Win XP and Win 7 compatible
Network:	Needed for client mode

Visitor 3000 Access Control

Visitor 3000 is modular in its architectural approach and this lends itself to a significant range of functionality beyond simply issuing ID passes. Typically, Visitor makes a natural front-end to any physical access control system providing a simple to use solution for both new and retrofit systems.

Nowadays ever more sophisticated security systems are on the increase and a very wide range of technologies exist. Chelsfield are able to supply custom modules that will talk to just about any type of system. We have significant experience in access control technologies, video pattern recognition, alarm verification, tracking systems and data encryption.

Whatever your needs, whether you are considering a small personnel access control system involving just a few nodes, or a site-wide structured control installation, Visitor 3000 eases integration and implementation. If you are at the planning stage it may well pay you to talk to your sales agent, just to see what may be possible, or you can contact us directly, particularly if you need to integrate seemingly incompatible systems or you discover you need something that can't be purchased off the shelf

Download Your Copy Today!

Visitor may be downloaded from the Chelsfield website: **www.chelsfieldsolutions.co.uk**. Just a single zip file is required which contains all the necessary installation and support files needed for a new installation.

Once installed, the software will have strictly limited functionality until you register with us. The registration process is very simple and only takes a couple of minutes via phone or e-mail. You will just need to provide your organisation name and address and registration number which can be found on the registration screen.

Download YOUR COPY today and contact us to find out how Visitor can benefit your organisation. It's inexpensive and payment options, including a LOW COST RENTAL PLAN, are available.
